

CLIMAT F

Is climate the same as weather?

No.

Weather is the wind, temperature, and precipitation at a specific moment.

Climate is the weather in a place over many years ex. 30 years of weather.

Climate Zones

There are 3 climate zones on Earth:

1. Tropical

- Characteristics - hot, humid, and rainy
- Countries - Venezuela, Costa Rica, Indonesia, Jamaica

Climate Zones

2. Temperate

- Characteristics - **Never too hot and never too cold**
- Countries - **United States, North Africa, Japan, Spain**

Climate Zones

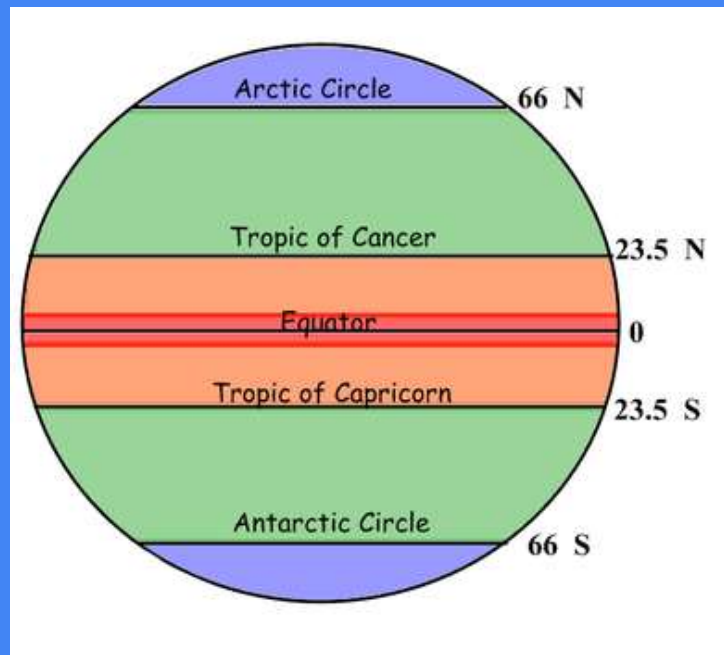

3. Polar

- Characteristics - temperature below freezing, icy, and covered in snow
- Countries - Norway, Denmark, Sweden, Finland

What affects climate?

- **Latitude:** as latitude increases (moves away from equator), the average temperature cools. As latitude decreases (moves toward equator), the average temperature rises

What affects climate?

- **Altitude:** the higher the elevation, the cooler the overall climate is

What affects climate?

- **Distance from the sea:** places close to the ocean are cooler in the summer and warmer in winter

Landscapes

- Change depending on the climate.
- There are 3 landscapes: **tropical** climate landscapes, **temperate** climate landscapes, and **polar** climate landscapes.
- The animals and plants are different in each of the landscapes.

Tropical Climate Landscapes

- Savannah
- Desert
- Jungle

Temperate Climate Landscapes

- Deciduous forest
- Mediterranean forest

Polar Climate Landscapes

- Covered in ice and snow
- Have ice and snow in the winter, but in the summer it melts

Climate Change

- **Greenhouse Effect:** heat is trapped near Earth's surfaces by greenhouse gases which are part of the Earth's atmosphere. This helps to keep the temperature and humidity perfect for living things.

Climate Change

- **Global Warming:** human activity is producing more greenhouse gases which is causing the climate to change very quickly. This affects landscapes and the animals and plants that live there.

What Can We do?

- To reduce greenhouse gases and stop global warming we can recycle, reuse, and save energy and water.

VO CAB REVIEW

Clima = Climate

VOCAB REVIEW

Tropical Climate Zone = Zona Cálida

VOCAB REVIEW

Temperate Climate
Zone

= Zona Templada

VO CAB REVIEW

Polar Climate Zone = Zona Fría

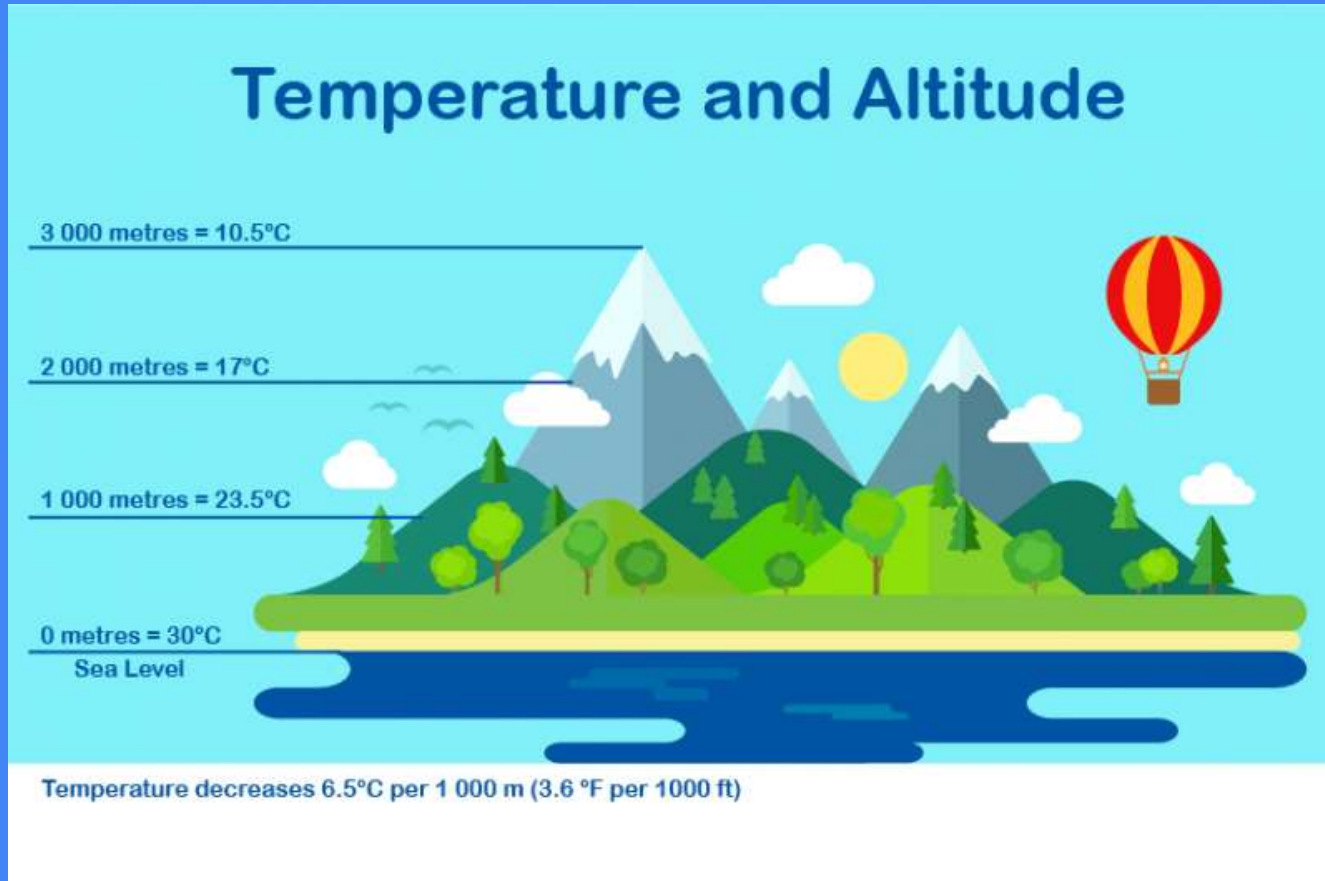

VOCAB REVIEW

Latitud = Latitude

VOCAB REVIEW

Altitud = Altitude

VOCAB REVIEW

Distance from the sea = **proximidad al mar**

Is this a Temperate or Tropical Climate Landscape?

Temperate Climate Landscape!

Is this a Temperate or Polar Climate Landscape?

Polar Climate Landscape!

Is this a Polar or Tropical Climate Landscape?

Tropical Climate Landscape!
